

## CLIENT SUCCESS STORY

# HELPING AN OUTDATED SYSTEM LIVE ON

# Looking toward the future, the world's largest aerospace company enlists us to evolve a decades-old system.

## The Challenge

Our client, a large aerospace company, needed to enhance, and bring up to date, an **existing solution that was developed decades ago**. With no way to move the project forward without a thorough understanding of the current software, and lacking a roadmap that would take them where they needed to go, they turned to Technology Partners.

## The Plan

By mapping out the software's current functionality, and researching the origins that drove it to being so integral to the company's business, Technology Partners was able to plot a course for the client that would lead to success. By identifying a key member of the original software development team from the 60's, we were able to **bridge the gap between new and old**. The software was updated using the C# application development framework, giving the client a sustainable solution that would last for decades to come.

## The Results

Our client now has a solution that is both flexible and scalable. No longer worrying about maintaining support channels for outdated technology, they can push forward with business initiatives knowing that the software that drives so much of their business is stable and built on a solid platform.

Identifying a key member of the original project team helps produce a solid roadmap.

## 57% of Enterprises

use software as a service (SaaS) apps
