

CLIENT SUCCESS STORY

HIPPA COMPLIANT MESSAGING SYSTEM

A startup looks to Technology Partners for the expertise needed to launch their revolutionary product.

The Challenge

A new startup when we began working with them, Mediprocity had outsourced all IT work to an outside team. **Things were not going well.** The necessary functionality was absent, and investors were getting anxious. Technology Partners was brought in on a 14-hour engagement to figure out the problem with the current software—and trust was built from there.

The Plan

As a new company Mediprocity's funding had to ebb and flow. Technology Partners' fractional team approach gave Mediprocity a fractional IT team that could **expand and contract as needed** with the priorities of the business. What started as an unstable prototype grew into a reliable, secure, HIPAA-compliant messaging system.

The Results

Mediprocity's application is **popular, profitable, and has gotten excellent client feedback.** The UI is unbeatable, making it enjoyable for doctors to use. The streamlined encryption approach ensures a stable, secure HIPAA-compliant backbone. The developed platform is easy to integrate with other service providers and enterprise customers, making onboarding quick and flexible. The simple architecture makes it easy to add new features and cheaper to maintain.

“Technology Partners Solutions Group went above and beyond in making Mediprocity a superior product.”
